TRAVIAN ALLY TOOL · ALLIANCE “HUMANS” · TS12 EUROPE

One place for the whole alliance

- **Chat** with channels, mentions and live defence calls
- **Villages** kept up to date by screenshot (OCR scans)
- **AI suggestions**: what to build / research / protect next
- **Incidents**: report an attack → threat mode → help call
- **Inactive search**, game data, schedule for calls
- **Admin**: members, rights, troops, costs
- Fully **English or German** – switch in the menu

Chat with channels and side navigation

Village page: 3 upload fields + AI instructions

Who sees what?

- One **rights matrix** (guest / member / moderator)
- Troops are seen **only by admins & mods**
- The AI sees **only your own account**

Tech in brief

- Next.js · Postgres · Docker
- Own server (Plesk)
- KI: Claude Haiku 5.5

GETTING STARTED & DATA

Join, upload a screenshot, done

Path A · Invite

- Admin sends a link in the game
- Open link → create account
- Player is linked right away

Path B · On your own

- Sign up, pick your player
- Put a code in your game profile
- Tool checks → unlocked

Then: **confirm your email** · password reset under “My account”

1 Upload
Pick the type or let it detect; paste / drag & drop

→

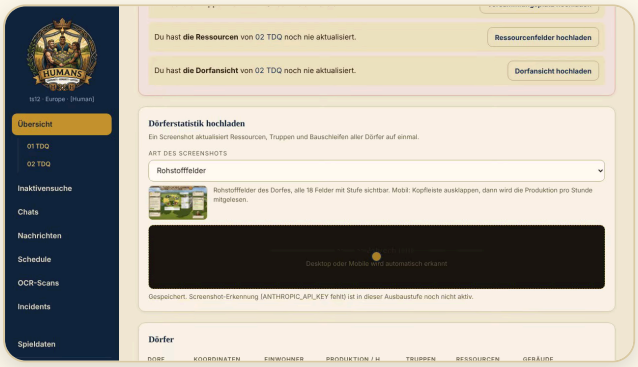

2 Read
AI reads twice, tool checks numbers

→

3 Review
Unsure values wait under “OCR scans”

→

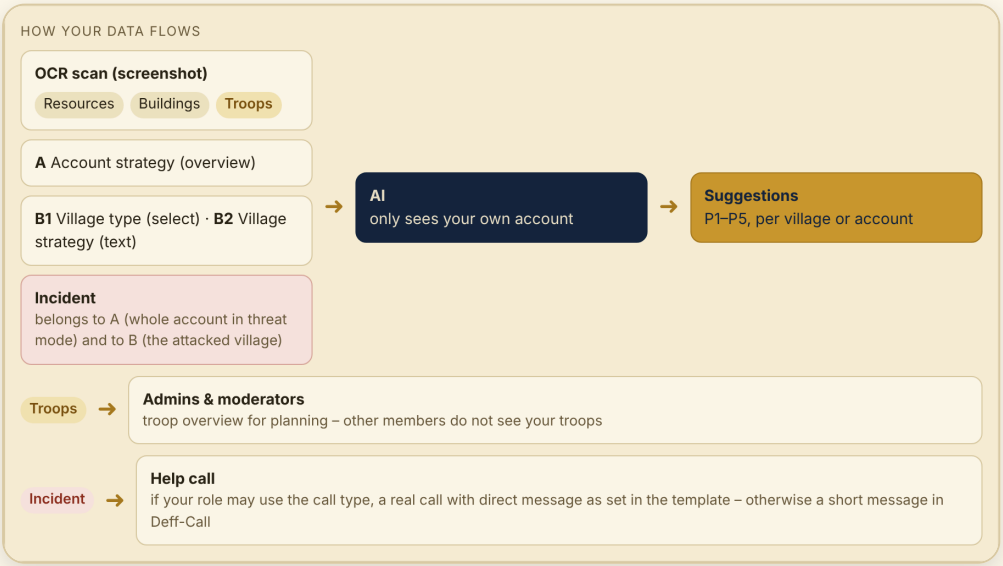

4 Confirm
Village updated, image deleted

OCR scans: markers on the image, hover to fix a value

What happens to the data?

- Resources, buildings, troops → AI
- Troops otherwise only for admins & mods
- Image is deleted after confirming

Data flow (from the help page): scan + A/B1/B2 + incident → AI → suggestions

AI ADVISOR

Code calculates – the AI prioritises

Data
Scans, map, game data, instructions A/B

→

Situation
Cost/benefit, crop, data age, incidents

→

1 AI call
Haiku 5.5 ranks & explains

→

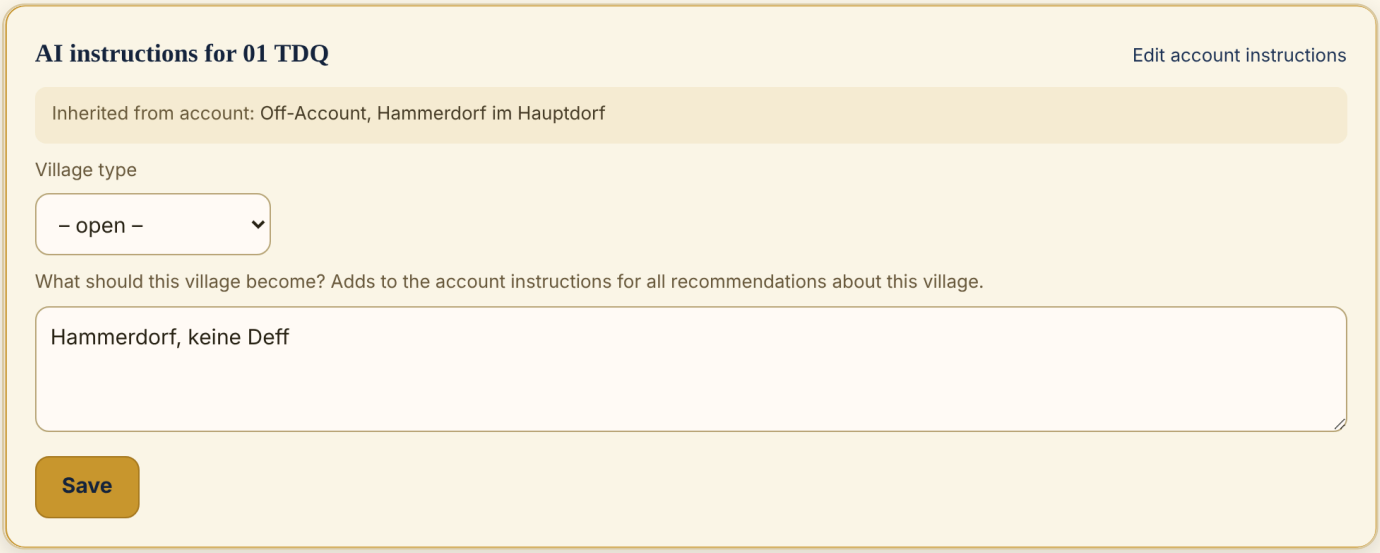

Max. 8 suggestions
Priority 1–5, checked

Instructions

- **A** Account strategy (e.g. off account)
- **B1** Village type (select)
- **B2** Village strategy (free text)
- “Done / Dismiss” feeds the next run

Cost cap

- 1 run per day & account
- No run without changes
- +1 run per incident
- Budget **€15/month** (AI + S3)

AI instructions on the village: inherited account strategy, village type, village strategy

Privacy

- History search: hard per-user filter **+ row-level security**
- Village IDs from the AI are checked against your own
- Without the **ai.advice** right: no AI fields shown

INCIDENTS

Report an attack → one path to a call

Battle report
Screenshot or typed in

→

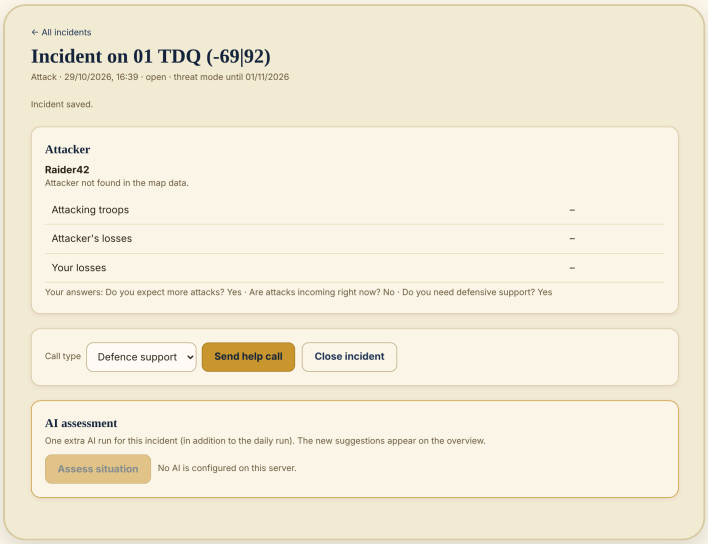

3 questions
More attacks? Incoming now? Need defence?

→

Threat mode
3 days (1 day if no more attacks)

→

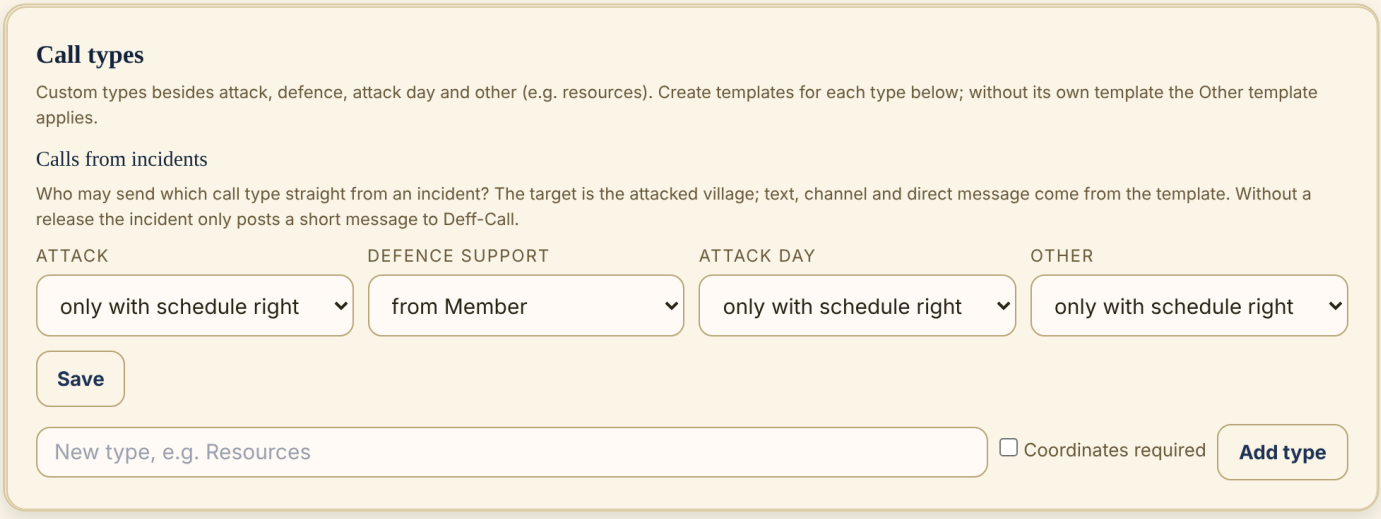

Help call
Right per call type

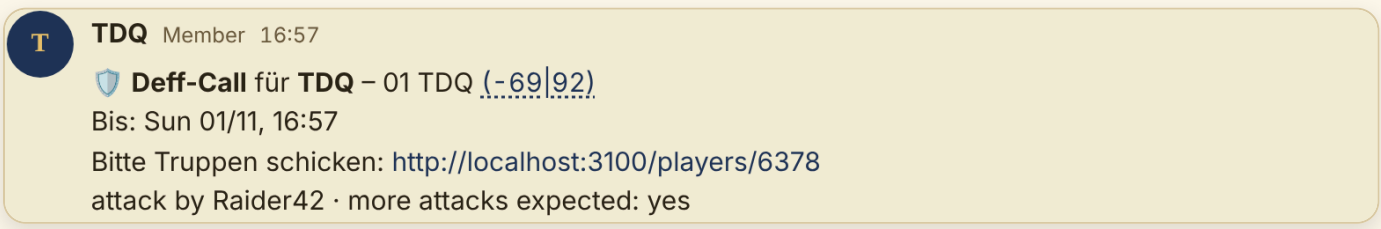

Incident: attacker, losses, pick call type, AI check

Call logic

- Admin decides **who may send which call type**
- Allowed → **real call**, target = attacked village, text & DM from the template
- Otherwise → short message in **Deff-Call**
- Admins see **all open** incidents

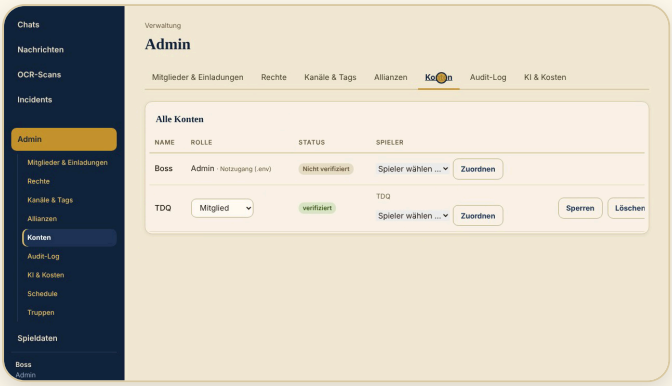

Schedule → “Calls from incidents”: release per call type

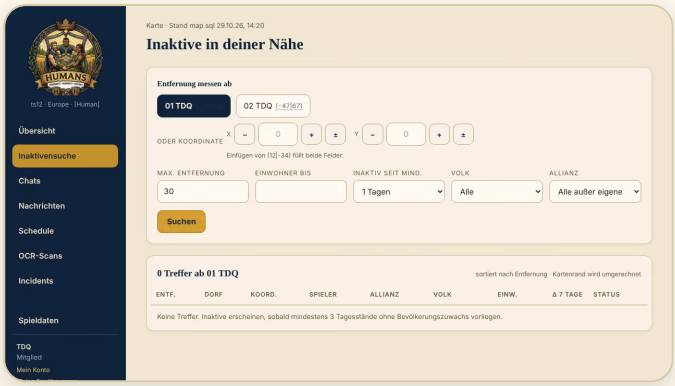

Result in the Deff-Call channel (“Bis” = until threat mode ends)

ADMIN · HELP · OPERATIONS

Leaders coordinate, members play

Admin area with tabs

Inactive search

Admin tabs

- Members & invites
- Rights matrix
- Schedule & troops
- Channels, alliances, accounts
- AI & costs

Help page /help

- Public, all features
- Tiles → one article only
- Short videos DE/EN
- Quick links after sign-in

Help tiles

Update on the server

```
cd /opt/travian-ally-tool && git pull && ./scripts/deploy.sh
```

- Then: release call types in the schedule
- Open: production calculation, scraper, videos with real data
